EXECUTIVE SUMMARY

The Sacramento Area Council of Governments (SACOG) is the designated Metropolitan Planning Agency for the Sacramento Region and is responsible for all regional transportation planning activities in Sacramento, Sutter, Yolo, and Yuba Counties, and in El Dorado and Placer Counties outside of the Tahoe Basin. For purposes of conformity, SACOG is responsible for the analysis of transportation activities in that area and in eastern Solano County. Presented in this report is the Conformity Analysis for the adoption of the 2025 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS), also referred to as the "2025 Blueprint," and the 2025 Metropolitan Transportation Improvement Program (MTIP) Amendment #11.

The conformity demonstration requirement is described in the Clean Air Act Section 176(c) (42 U.S.C. 7506(c)) and U.S. Environmental Protection Agency (EPA) transportation conformity regulations (40 CFR 93 Subpart A). Transportation conformity ("conformity") is a way to ensure that Federal funding and approval goes to those transportation activities that are consistent with air quality goals set for ozone, particulate matter, or nitrogen dioxide. The analysis presented in this report demonstrates that the 2025 MTP/SCS and concurrent MTIP Amendment meets the criteria specified in these regulations.

CONFORMITY REQUIREMENTS

Conformity must be demonstrated in "all nonattainment and maintenance areas for transportation-related pollutants for which the area is designated nonattainment or has a maintenance plan" (40 CFR 93.102). The following are the designations within the Sacramento region:

- 2008 8-Hour Ozone (including the ROG and NOx precursors) Nonattainment Area:
 - The Sacramento Federal Nonattainment Area (Sacramento, Yolo and portions of El Dorado, Placer, Sutter, Solano Counties) - Severe-15 and
 - The Sutter Buttes Area (Sutter County). The 2008 ozone standards classify the Sutter Buttes Area as an unclassified/attainment area for ozone, effective July 20, 2013.
- 2015 8-Hour Ozone (including the ROG and NOx precursors) Nonattainment Areas:
 - The Sacramento Federal Nonattainment Area (Sacramento, Yolo and portions of El Dorado, Placer, Sutter, Solano Counties), effective August 13, 2021.
 - A voluntary "bump up" request to redesignate this area as Severe has been submitted by the regional air district and is pending EPA action.
 - The Sutter Buttes Area (Sutter County). The 2015 ozone standards classify the Sutter Buttes Area as a marginal nonattainment area for ozone, effective June 4, 2018.
- Particulate Matter (PM₁₀) Maintenance Area (Sacramento County), effective October 28, 2013.
 - The Second Maintenance Plan was approved March 14, 2024, effective April 15, 2024.
 - The First Maintenance Plan showed that PM₁₀ and NOx emissions are significant contributors to the ambient PM₁₀ concentrations in Sacramento. (Second Maintenance Plan, page 3-1 and 3-2).
 - Volatile organic compounds were not identified as contributing to the PM₁₀ concentrations and therefore, not included in the Second Maintenance Plan. (Second Maintenance Plan, page 3-1 and 3-2).

- 2006 Fine Particulate Matter (PM_{2.5}) Nonattainment Area and Maintenance Area:
 - Moderate Nonattainment Area - Sacramento Area (Sacramento and portions of Yolo, Solano, Placer and El Dorado Counties)
 - Maintenance Area -Yuba City-Marysville Area (Sutter and a portion of Yuba County)
 - The second PM_{2.5} Maintenance Plan has been approved by CARB. The plan is pending action by the EPA.

Under a determination of conformity, the following criteria are applied:

1. The latest planning assumptions and emission models are used.
2. The transportation plan and program pass an emissions budget test using a budget that has been found adequate or been approved by EPA or an interim emissions test where budgets have not been established.
3. The transportation plan and program provide for the timely implementation of transportation control measures (TCMs).
4. Interagency and public consultation are part of the process.

SACOG follows the interagency review process described in SACOG's Public Participation Plan. The dedicated interagency forum for this process is the bi-monthly Regional Planning Partnership meeting. Upon reaching a determination finding that is approved by SACOG's Board, the conformity analysis is submitted to Federal Highway Administration (FHWA) and Federal Transit Administration (FTA) for final approval in consultation with Caltrans.

The MPO Air Quality Conformity Checklist identifies applicable federal requirements for completing a conformity determination. This checklist is included for reference in Appendix A.

CONFORMITY TESTS

Federal conformity regulations describe two types of tests; an emissions budget test and an interim emissions test. To run an emissions budget test, a region must have budgets in place that have been found adequate for transportation conformity purposes or are contained in an approved air quality implementation plan. Predicted emissions for the 2025 MTP/SCS and 2025 MTP Amendment #11 must be less than or equal to these budgets. The second test, an interim emissions test is used when approved or adequate budgets are not in place and the region is in nonattainment. Predicted emissions for the 2025 MTP/SCS and 2025 MTIP Amendment #11 must be less than or equal to emissions predicted in the baseline scenario. Applicable air quality implementation plans and conformity tests are further described within the text.

FINDINGS OF THE CONFORMITY ANALYSIS

A regional emissions analysis was conducted for the years 2026, 2027, 2029, 2032, 2033, 2035, 2042 and 2050 for each applicable pollutant. See Appendix C, Table 1, for the analysis years for each pollutant. Each analysis utilized the latest planning assumptions and emissions models. The conclusions of the SACOG analysis are:

- Ozone: The Analysis determined that the implementation of the 2025 MTP/SCS and 2025 MTIP Amendment #11 would result in less total regional on-road vehicle-related emissions (ROG

and NOx) than the emissions budget found adequate by the EPA in the *Sacramento Regional 2008 NAAQS 8-Hour Ozone Attainment Plan and Reasonable Further Progress Plan*, and the *Sacramento Metro Area portion of the "2018 Updates to the California State Implementation Plan*. This analysis has used these budgets for demonstration of the 2008 and 2015 standards.

- PM_{10} : The Analysis determined that the implementation of the 2025 MTP/SCS and 2025 MTIP Amendment #11 would result in less total regional on-road vehicle-related emissions than the emissions budget found adequate by the EPA in the *2010 PM_{10} Implementation/Maintenance Plan and Re-designation Request for Sacramento County*. Budgets for the Second 10-Year Maintenance Plan are included in this document. EPA approved the *Second 10-Year PM_{10} Maintenance Plan* on March 14, 2024, effective April 15, 2024.
- $PM_{2.5}$: The Analysis determined that the total regional on-road vehicle-related emissions associated with the implementation of the 2025 MTP/SCS and 2025 MTIP Amendment #11 for the analysis years are projected to be less than or equal to the emissions for the Baseline scenario, satisfying the test established in *Interim Transportation Conformity Guidance for 2006 $PM_{2.5}$ NAAQS Nonattainment Areas* in the Sacramento area. The Analysis also found that implementation of the 2025 MTP/SCS and 2025 MTIP Amendment #11 would result in less total regional on-road vehicle-related emissions than the emissions budgets found adequate by the EPA in the *2014 Yuba City-Marysville $PM_{2.5}$ Maintenance Plan and Re-designation Request*.
- TCMs: The implementation of the 2025 MTP/SCS and 2025 MTIP Amendment #11 will not impede the timely implementation of the TCMs identified in the *2009 8-Hour Ozone Attainment and Reasonable Further Progress Plan, 2013 revisions. TCMs identified for the 2015 SIP, in the approval process, are included for reference*.
- Consultation for this analysis was conducted in accordance with SACOG's Public Participation Plan.
- Both the 2025 MTP/SCS and 2025 MTIP Amendment #11 have been financially constrained consistent with 40 CFR 93.108 and with 23 CFR Part 450.

CONFORMITY DETERMINATION

OVERVIEW OF THE PHYSICAL ENVIRONMENT

The Sacramento Valley Air Basin is a basin bounded by the Sierra Nevada Mountain Range to the east and the Coastal Mountain Ranges to the west and spans from Shasta County in the north to Sacramento County in the South. Topography in the Sacramento Valley is generally flat, with elevations anywhere from slightly below sea level near the Sacramento/San Joaquin Delta to over 2,150 feet above sea level at the Sutter Buttes. Hot dry summers and mild rainy winters characterize the Mediterranean climate of the Sacramento Valley Air Basin (SVAB). During the year the temperature may range from 20 to 115 degrees Fahrenheit with summer highs usually in the 90s and winter lows occasionally below freezing. Average annual rainfall is about 20 inches with about 75 percent occurring during the rainy season generally from November through March. The prevailing winds are moderate in strength and vary from moist clean breezes from the south to dry land flows from the north.

The mountains surrounding the SVAB create a barrier to airflow, which can trap air pollutants when certain meteorological conditions exist. The highest frequency of air stagnation occurs in the autumn and early winter when large high-pressure cells lie over the Sacramento Valley. The lack of surface wind during these periods and the reduced vertical flow caused by less surface heating reduces the influx of outside air and allows air pollutants to become concentrated in a stable volume of air. The surface concentrations of particulate matter pollutants are highest when these conditions are combined with smoke or when temperature inversions trap cool air, fog, and pollutants near the ground.

The ozone season (May through October) in the Sacramento Valley is characterized by stagnant morning air or light winds, with the delta sea breeze arriving in the afternoon out of the southwest. In addition, longer daylight hours provide a plentiful amount of sunlight to fuel photochemical reactions between reactive organic gases (ROG) and oxides of nitrogen (NOx), which result in ozone formation. Likewise, PM_{2.5} peak concentrations typically occur during the winter season (November – February) when temperature inversion and low wind speeds trap and concentrate PM_{2.5} emissions, cooler temperature and high humidity increase the secondary formation of particulates.

As an air basin, air quality in the Sacramento region is impacted not only by pollutants generated within the region, but also by pollutants generated in the San Francisco Bay Area and the San Joaquin Valley, which are carried into the Sacramento region by Delta breezes. The effect of pollutants transported from the San Francisco Bay Area or from the San Joaquin Valley on air quality in the Sacramento region can vary from substantial to inconsequential on any given day, largely determined by accompanying meteorological conditions. Thus, the success of the Sacramento region in attaining better air quality is partially contingent on the achievement of better air quality in nearby areas that affect Sacramento's air quality.

INTRODUCTION

The Sacramento Area Council of Governments (SACOG) is the designated Metropolitan Planning Organization (MPO) for the Sacramento Region and is responsible for all regional transportation planning activities in Sacramento, Sutter, Yolo, and Yuba Counties, and El Dorado and Placer Counties outside of the Tahoe Basin. Presented in this report is the Conformity Analysis for the 2025 MTP/SCS and 2025 MTIP Amendment #11. Transportation conformity ("conformity") is a way to ensure that Federal funding and approval goes to those transportation activities that are consistent with air quality goals set for ozone, particulate matter, or nitrogen dioxide. The SVAB is composed of the six counties listed above and the portion of Solano County which is located to the east of the crest of the Coastal Mountain Range. Solano County is located within the jurisdiction of the Metropolitan Transportation Commission for the purpose of transportation planning activities; because the eastern portion of the county is in the SVAB it is included in SACOG's conformity analysis.

SACOG performed an air quality conformity determination on the 2025 MTP/SCS and 2025 MTIP Amendment #11 for the following stated designation areas:

- 2008 8-Hour Ozone (including the ROG and NOx precursors) Severe-15 Nonattainment Area:
 - The Sacramento Metropolitan Area (Sacramento, Yolo and portions of El Dorado, Placer, Sutter, Solano Counties); and

- The Sutter Buttes Area (Sutter County). The 2008 ozone standards classify the Sutter Buttes Area as an unclassified/attainment area for ozone, effective July 20, 2013.
- 2015 8-Hour Ozone (including the ROG and NOx precursors) Serious Nonattainment Area:
 - The Sacramento Metropolitan Area (Sacramento, Yolo and portions of El Dorado, Placer, Sutter, Solano Counties), effective August 13, 2021.
 - The Sutter Buttes Area (Sutter County). The 2015 ozone standards classify the Sutter Buttes Area as a marginal nonattainment area for ozone, effective June 4, 2018.
- Particulate Matter (PM₁₀) maintenance area (Sacramento County); approved budgets.
- Fine Particulate Matter (PM_{2.5})
 - Moderate Nonattainment area of Sacramento Area (Sacramento and portions of Yolo, Solano, Placer, and El Dorado Counties)
 - Maintenance area of Yuba City-Marysville Area (Sutter and a portion of Yuba Counties)

The SACOG Board of Directors is scheduled to act on this conformity determination at its August 20th, 2026 meeting. For this conformity determination, the conformity analysis performed for the 2025 MTP/SCS is consistent with the analysis performed for the 2025 MTIP Amendment #11 (93.114). The following emissions analysis demonstrates that the 2025 MTIP/SCS and 2025 MTIP Amendment #11 meets the emissions conformity tests based on the Transportation Conformity requirements found in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, Code of Federal Regulations (CFR), Part 93, Subpart A for the federally-designated nonattainment areas as noted in the following section.

BACKGROUND

Federal regulations require that SACOG prepare air quality conformity determinations for its transportation plans and programs. The purpose of the conformity determination is to ensure that SACOG's plans and programs "conform" to all applicable federal air quality requirements. Based on guidance found in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, Code of Federal Regulations, Part 93, Subpart A, conformity determinations must be based upon the most recent estimates of on-road vehicle-based emissions. The emissions estimates must also be based upon the most recent population, employment, travel and congestion forecasts from SACOG, acting as the federally-designated MPO for the Sacramento region (see Appendix C, Table 2).

SACOG has an emissions conformity procedure based on the modeling requirements contained in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, CFR, Part 93, Subpart A. As part of this procedure, SACOG prepares a series of forecasting model runs for the Sacramento air quality planning areas using the Sacramento Activity-Based Travel Simulation Model (SACSIM) travel demand model. This model uses estimates of population, employment and travel patterns for 2020, as the "base year," and future estimates of these same parameters for a series of future years. The future years are designated as "milestone" or "horizon" years for certain types of pollutant emissions, under EPA regulations. The SACSIM travel demand model is used to estimate daily vehicle miles traveled (VMT) in five-mile-per-hour increments for each model run. The total number of trips for each model run is also generated. The daily VMT from each generated model run are then used as inputs to the vehicle-emissions forecasting model, EMFAC 2021; SACOG includes VMT data as provided by the Metropolitan Transportation Commission to account for projects in the eastern

portion of Solano County. The EMFAC 2021 model forecasts emissions based on the travel-related forecasts from both models.

CONFORMITY APPROACH

The last conformity determination for the Sacramento Ozone Nonattainment Area, PM₁₀ Maintenance Area, and PM_{2.5} Maintenance Area and Nonattainment Area was adopted by the SACOG Board of Directors on September 19, 2024. The full conformity finding was approved by FHWA/FTA on December 16, 2024.

The conformity tests for the Sacramento Ozone Nonattainment, PM₁₀ maintenance, and PM_{2.5} Maintenance Area and Nonattainment Areas consist of a quantitative emissions analysis; a budget test for ozone, PM₁₀, and the Yuba City-Marysville PM_{2.5} maintenance area, and an interim Baseline test for PM_{2.5} nonattainment areas without an approved plan or adequate budgets. Details can be found within Appendix C.

The conformity determination for the Sutter Buttes Ozone Nonattainment Area does not require a quantitative regional emissions analysis because the transportation projects and planning assumptions for both the Build and No-Build scenarios for all potential analysis years are the same. [93.119 (g) (2)].

FINANCIAL CONSTRAINT

SACOG is required to demonstrate that the 2025 MTP/SCS and 2025 MTIP Amendment #11, and amendments thereof, are financially constrained. Specifically, SACOG must show that it is reasonable to assume that funds will be available to pay for the projects included in the program and plan. SACOG identified approximately \$40.9 billion that will come to the region to pay for transportation investments between 2020 and 2050. Chapter 4 of the 2025 MTP/SCS describes the investment strategy for the plan and detailed revenue estimates by five-year increments are shown in Appendix B of the 2025 MTP/SCS. Also listed are the assumptions behind the revenue estimates. Identified within the 2025 MTIP is additional documentation showing constraint of the program over the next four years (93.108). Additional information can be found in supplemental documentation developed for the 2025 MTP/SCS, Appendix B.

INCLUSION OF ALL FEDERAL AND REGIONALLY SIGNIFICANT PROJECTS

The 2025 MTP/SCS and concurrent 2025 MTIP Amendment, and amendments thereof, include all federal and regionally significant projects expected to occur in the nonattainment and maintenance areas as identified in the introduction above (93.106).

Appendix B details the scope of projects included in the 2025 MTP/SCS and the concurrent 2025 MTIP amendment to allow adequate representation in the travel model to determine the interaction between regionally significant facilities, route options, travel times, transit ridership, and land use. It includes the following project list break-outs:

- *Non-Exempt/Regionally Significant Project Listing:* All planned projects determined to be regionally significant and not exempt from regional conformity analysis requirements. Regionally significant projects are projects that are located on a principal arterial or a functionally equivalent transit facility; on a highway or transit facility that is part of the regional modeling network; or other road or transit project that are considered regionally significant through Interagency Consultation. The Milestone Year for Conformity indicates the year in which the project is expected to open to traffic.
- *Exempt Project Listing:* All planned projects that are exempt from regional conformity analysis requirements (40 CFR 93.126-128). Projects are assigned specific exempt categories upon amendment into the MTIP; exempt projects in the MTP are all categorized as "MTP Exempt".
- *Eastern Solano County Project Listing:* The exempt and non-exempt/regionally significant projects located outside of SACOG's metropolitan planning area in eastern Solano County, as provided by Metropolitan Transportation Commission (MTC).

LATEST PLANNING ASSUMPTIONS

The emission estimates developed for this conformity determination are based on the population and employment projections for the Sacramento and Yuba/Sutter areas that was approved by the SACOG Board of Directors in February 2022 as part of the 2025 MTP/SCS development, and the latest population growth projections for the 2025 Blueprint development. The planning assumptions list was approved by SACOG's Regional Planning Partnership at the December 4, 2024 meeting. The finalized list of the assumptions used in developing this conformity determination can be found in Appendix C, Table 7. (93.110 a, b).

LAND USE ASSUMPTIONS

The land use assumptions for the plan were developed in cooperation with local jurisdictions. A regional growth projection was adopted by the SACOG Board of Directors in February 2022 for the purposes of developing the 2025 MTP/SCS.

This projection consists of a demographic forecast tied to a forecast of the number of new housing units that will be needed throughout the region through 2050. The forecast closely aligns with Regional Housing Needs Assessment (RHNA) projections, and coordinates with the California Department of Housing and Community Development and the California Department of Finance forecasts.

Growth rates and patterns within an area are influenced by various local, regional and national forces that reflect ongoing social, economic and technological changes. Ultimately, the amount and location of population growth and economic development that occurs within a specific area is determined by market forces, and regulated by city and county governments through zoning, land use plans and policies, and decisions regarding development applications. Local government and other regional, state and federal agencies also make decisions regarding the provision of infrastructure (e.g. transportation facilities, water facilities, sewage facilities) and protection of natural resources that may influence growth rates and the location of future development. A discussion of the land use allocation at the jurisdictional level is included in Appendix D of the 2025 Blueprint (93.122 b 1 iii²).

TRANSPORTATION SYSTEM

As part of the 2025 MTP/SCS, all financial, highway, and transit system characteristics were reviewed and updated to reflect the most recent planning assumptions. Transportation plans often focus on improving mobility through investment in transportation infrastructure and services. Measures of mobility, such as the percent of travel using a particular travel mode or mode share, travel time, and travel delay provide valuable information about how well current and planned transportation systems function. Chapters 4 and 5 of the 2025 plan and Appendix E: Plan Performance discuss the performance outcomes of the plan.

LATEST EMISSIONS MODEL

One of the critical inputs into determining emissions associated with the 2025 MTP/SCS and concurrent 2025 MTIP Amendment is the selection of which emissions factors to use. EMFAC 2021 was used in this conformity analysis, which began on December 4, 2024, when the Regional Planning Partnership approved the conformity planning assumptions, as shown in Appendix C.

The EPA/USDOT January 18, 2001, guidance on latest planning assumptions and EPA's July 2004 final rule, indicate that new vehicle registration data must be used when it is available prior to the start of new conformity analyses and that states should update the data at least every five years. The State of California reaffirmed their commitment to keeping the latest planning assumptions included in EMFAC updated on a three-year cycle. On January 31, 2006, CARB submitted a letter to the EPA and to the California Division of the FHWA indicating the State's intention to update future revisions to EMFAC on a three-year basis. These EMFAC updates would reflect, among other new information, updated vehicle fleet data.

The most recent version of EMFAC, EMFAC 2021 was approved for use by EPA on November 15, 2022. This latest version must be used as described in EPA's notice (87 FR 68483) for all new regional emissions analyses for transportation conformity purposes that are started on or after November 15, 2024.

MODELING DOCUMENTATION

SACOG's traffic model uses land use inputs (socioeconomic data) by parcel for trip generation. These socioeconomic data are expressed in terms of households and employment, and a representative population file which is consistent with the land use data and reflects the demographic forecasts adopted by the SACOG Board for use in development of the long-range transportation plan.

SACOG uses the SACSIM travel demand model. The model consists of four sub-models to account for different types of travel in the region: an activity-based sub-model which accounts for all household trips generated within the region, except airport passenger trips; a commercial vehicle sub-model which accounts for all travel by commercial vehicles, including trips by large trucks; an airport passenger ground-access model, which accounts for travel by air passengers to the Sacramento International Airport; and an external travel sub-model, which accounts for all travel within the region by travelers with origins or destinations outside the region, or travelers through the region. The travel demand estimates from the four sub-models are combined to represent total weekday travel demand in the SACOG region. SACOG periodically updates and improves the SACSIM

model, and rolls up those improvements into numbered versions, for use in the analysis of the MTP/SCS. SACSIM23 was used for analysis of the 2025 MTP/SCS and concurrent 2025 MTIP amendment, and for this air quality conformity analysis. More detailed information about SACSIM23 can be found on the SACOG website:

<https://www.sacog.org/home/showpublisheddocument/3307/638975101175200000>

SACSIM is also used by Caltrans and many of SACOG's member agencies for their own transportation analyses, and SACOG is in regular communication with the many users of the model. Adjustments or changes to the model suggested by external users are reviewed by SACOG staff and may be incorporated into ongoing updates and releases of the model. SACOG also receives public comment and input on SACSIM at annual Travel Model Users' Conferences

(<https://www.sacog.org/planning/data-resource-center/travel-demand-model/travel-model-user-conference>) including comments on proposed changes and improvements to SACSIM.

The highway, transit, and bike and walk systems in the SACOG region are represented in link-and-node networks. Link types include freeway, freeway ramp, expressway, arterial, and collector. Current and future-year road networks were developed for the 2025 MTP/SCS. The model uses equilibrium, a capacity sensitive assignment methodology, and the data from the model for the emission estimates to differentiate between peak and off-peak volumes and speeds. In addition, the model is reasonably sensitive to changes in time and other factors affecting travel choices. The results from model validation/calibration were analyzed for reasonableness and compared to historical trends.

The travel demand model estimates travel demand and traffic volumes for nine time periods: three one-hour periods for the 7am-10am peak, one midday period covering 10am-3pm, three one-hour periods for the 3pm-6pm peak, a 6pm-8pm evening period, and an 8pm-5am overnight period. Transit travel demand is simplified to five time periods: 5am-9am, 9am-3pm, 3pm-6pm, 6pm-8am, and 8pm-11pm. Daily forecasts are calculated by summing the time periods.

SACOG completed the development of the SACSIM travel demand model and its validation to a new base year of 2020, based on the portion of 2020 before COVID lockdowns. The model was validated by comparing its estimates of peak, off-peak and daily traffic levels to available peak, off-peak and daily traffic counts. The model validation meets standard criteria for replicating total traffic volumes on various road types and for percent error on links. The validation also meets standard criteria for percent error relative to traffic counts. The model has been extensively tested and validated by SACOG staff.

The conformity regulation (93.122 b 3) states that Highway Performance Monitoring System (HPMS) estimates of VMT shall be considered the primary measure of VMT within a non-attainment area for the classes of roadways included in HPMS. The regulation also allows locally-developed count-based programs. SACOG uses both HPMS estimates and a database of local traffic counts. HPMS estimates of VMT by county are used to validate model estimates of VMT. Locally developed traffic counts are used to validate traffic assignments by functional class of roadway and for regional screenlines, as well as to evaluate assignment error levels for different facility types.

Estimates of regional transportation-related emissions, that are used to support conformity determinations, must be made in accordance with the procedures laid out in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, Code of Federal Regulations, Part 93, Subpart A. SACOG's SACSIM Travel Demand model, which was used to estimate transportation-related

emissions for the Sacramento nonattainment areas, currently meets all the modeling requirements as set forth in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, Code of Federal Regulations, Part 93, Subpart A.

AIR QUALITY EMISSIONS ANALYSIS

In order for SACOG to make a conformity determination on the 2025 MTP/SCS and concurrent MTIP Amendment, a quantitative emissions analysis must be performed for the Sacramento air quality planning areas. SACOG has completed a quantitative emissions analysis for the nonattainment and maintenance areas as shown below and in Appendix C. SACOG prepares estimates of emissions for the Sacramento air quality planning areas for the analysis years described below. Estimates of emissions are prepared in accordance with the conformity regulations found in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, Code of Federal Regulations, Part 93, Subpart A.

YEARS OF ANALYSIS

The analysis years of 2026, 2027, 2029, 2032, 2033, 2035, 2042, and 2050 were chosen for the Sacramento air quality planning areas for the following reasons:

- 2026 is a budget year under the 2015 ozone NAAQS. It is also a proposed budget year for PM_{2.5} for the Yuba City-Marysville Maintenance Area.
- 2027 is a proposed budget year for PM₁₀ as part of the Second Maintenance Plan and represents a horizon year that is less than ten years apart from the last year of the plan under section 93.106 (a) (1).
- 2029 is a proposed budget year for ozone as part of the 2015 standard for severe non-attainment areas.
- 2032 is the proposed attainment year for ozone for the Sacramento Severe non-attainment area.
- 2033 is a proposed budget year for PM₁₀ as the final year covered by the Second PM10 Maintenance Plan of Sacramento County.
- 2035 represents a horizon year of the plan. It is also a proposed budget year for PM_{2.5} for the Yuba City-Marysville Maintenance Area.
- 2042 represents a horizon year that is less than ten years apart from the last year of the plan under section 93.106 (a) (1).
- The year 2050 represents the last year of the transportation plan's forecast period and, therefore, is required to be an emission analysis year, as specified under section 93.106 (a)(iv) of the conformity regulation.

ANALYSIS TECHNIQUES

The analysis techniques that were used for generating Reactive Organic Gases (ROG) and Nitrogen Oxides (NOx) emissions for the conformity submittal are documented in the following section. Specifically, SACOG employed its SACSIM travel demand model for the Sacramento Ozone Nonattainment Area to generate trips and daily VMT for each alternative scenario. The outputs from the SACSIM model were then inputted into EMFAC 2021 to generate emissions. Emission projections for Ozone were made for the years 2026, 2029, 2032, 2035, 2042, and 2050.

For the PM₁₀ analysis, SACOG utilized a combination of analysis methods. The direct exhaust for PM₁₀ came from EMFAC 2021 vehicle emissions model. The paved road dust component of PM₁₀ was analyzed using the AP-42 methodology denoted in EPA's *Official Release of the January 2011 AP-42 Method for Estimating Re-Entrained Road Dust from Paved Roads*; the road dust calculations have been updated ([Entrained Road Travel, Paved Road Dust](#)) to reflect this methodology. Specifically, the emission factor equation and k value (particle size multiplier) have been updated accordingly while CARB default assumptions for roadway silt loading by roadway class, average vehicle weight, and rainfall correction factor remain unchanged. Emissions are estimated for all roadway classes including freeways, arterials, collectors, local, and rural roads.

Section 93.122(e) of the Transportation Conformity regulation requires that PM₁₀ from construction related fugitive dust be included in the regional analysis, if it is identified as a contributor to the nonattainment problem in the PM₁₀ implementation plan. The road construction dust component of PM₁₀ was analyzed using the CARB's methodology ([Background Material: 1997 Section 7.8 Road Construction Dust](#)) outlined for estimating fugitive dust particulate matter due to construction activities while building roads. The emission estimates are based on the methodology in which miles of new road built are converted to acres disturbed, which is then multiplied by a generic project duration and an emission rate. Emission factors are unchanged from the previous estimates at 0.11 tons PM₁₀/acre-month of activity. The emission factor includes the effects of typical control measures, such as watering, which is assumed to reduce emissions by about 50%.

The activity data used in the calculation of all PM₁₀ components (direct emissions, paved dust and construction dust) came from SACOG's travel demand model. Emission projections of PM₁₀ were made for the years 2027, 2033, 2035, 2042, and 2050. The methodology employed the EMFAC 2021 vehicle emissions model.

SACOG performed a PM_{2.5} analysis for the Sacramento non-attainment area. Specifically, SACOG employed its SACSIM travel demand model for the nonattainment area to generate trips and daily VMT, and the outputs from the SACSIM model were then inputted into EMFAC 2021 to generate emissions. Emission projections of PM_{2.5} using the baseline test approach were made for the years 2026, 2035, 2042 and 2050. The baseline year for the nonattainment area is 2008 and hence, all emissions for future years were compared against the 2008 PM_{2.5} emissions.

SACOG also performed a PM_{2.5} analysis for the Yuba City-Marysville PM_{2.5} Maintenance Area employing its SACSIM travel demand model for the Yuba City-Marysville Maintenance Area to generate trips and daily VMT, and the outputs from the SACSIM model were then inputted into EMFAC 2021 to generate emissions. Emission projections of PM_{2.5} using the budget test approach were made for the years 2026, 2035, 2042, and 2050.

Geography, test type, and analysis years can be found in Appendix C, Table 1 and Figure 1. Additionally, details specific to Solano County can also be found there.

EMISSION CALCULATIONS

Once the analysis years have been selected, SACOG uses its SACSIM travel demand model to generate daily VMT and speed profile for each analysis year in question using population and employment assumptions, as shown in Appendix C, Table 2. The outputs from the transportation model are then input into a PC-based version of EMFAC 2021, which is used to generate emissions.

Note that Table 2 reports VMT for the entire SACOG modeling region, including eastern Solano County; because different subareas within the region are used for each criteria pollutant, the VMT used as inputs to EMFAC 2021 vary for specific emissions calculations.

EMISSIONS BUDGET TEST FOR OZONE (ROG AND NOX)

Under the emissions budget test, all future year ROG and NOx emissions associated with the 2025 MTP/SCS and concurrent 2025 MTIP Amendment must be equal to or less than the budgets found to be adequate from the *2018 Updates to the California State Implementation Plan* for the Sacramento Ozone Nonattainment Area. The years reflect EPA action regarding the final implementation rule for the 2008 NAAQS.

Appendix C, Table 4, shows that ROG and NOx emissions associated with this analysis are less than the budgets contained in the *2018 Updates to the California State Implementation Plan*. The off-model adjustments approved by EPA on May 6, 2026 were applied in the final calculations of NOx (Background material: EPA approval letter on the interim off-model adjustment factors). Emission Forecasts for the Sutter Buttes Ozone Nonattainment Area

A regional emission analysis under Section 93.122 of the Conformity Regulations is not required for the Sutter Buttes Ozone Nonattainment area because the transportation projects and planning assumptions for the area would be the same for all analysis years. This is because there are no existing or planned transportation facilities within the Sutter Buttes Ozone Nonattainment Area. The Sutter Buttes Ozone Nonattainment Area is comprised solely of the top of a mountain in Sutter County and is located entirely on private property with no public access. The air quality monitor placed atop the Buttes registers the area as exceeding Federal ozone standards even though there are no sources of pollutant emissions within the Area itself.

The conformity determination requirement for the Sutter Buttes Ozone Nonattainment Area has been met without any further emissions analysis because the planning analysis years [93.122(g)(2)], and the emissions predicted in the Build scenario are not greater than the emissions predicted in the No-Build scenario for all analysis years [93.119(a)].

EMISSIONS BUDGET TEST FOR PM₁₀

Under the emissions budget test, all future year PM₁₀ emissions associated with the 2025 MTP/SCS and concurrent 2025 MTIP Amendment must be equal to or less than the budgets established in the 2010 PM₁₀ Implementation/Maintenance Plan and Redesignation Request for Sacramento County for the Sacramento PM₁₀ Maintenance Area. The emissions budgets in the Maintenance Plan for 2022 was approved by EPA on September 26, 2013 and became effective October 28, 2013. The budgets for the second PM₁₀ 10-year maintenance plan were approved by EPA on March 14, 2024, effective April 15, 2024.

Appendix C, Table 5A, shows that PM₁₀ emissions associated with this analysis are less than the budgets contained in the Implementation/Maintenance Plan for the Sacramento PM₁₀ Nonattainment Area for all future years. Appendix C, Table 5A, shows that PM₁₀ associated with this analysis are less than the budgets contained in the Second Maintenance Plan for Sacramento PM₁₀ Nonattainment Area for all future years. Tables 5B, 5C, and 5D show the calculations for paved road dust and road construction dust component, which goes into the final PM₁₀ emission analysis. The off-model

adjustments approved by EPA on May 6, 2026 were applied in the final calculations of NOx and PM10 (Background material: EPA approval letter on the interim off-model adjustment factors).

INTERIM BASELINE TEST FOR THE SACRAMENTO PM_{2.5} NONATTAINMENT AREA

In the Interim Baseline test, all future year emissions associated with the 2025 MTP/SCS and concurrent 2025 MTIP Amendment must be less than or equal to emissions from the transportation system based on the Baseline scenario, to demonstrate conformity.

The motor vehicle activity forecasts for the 2025 MTP/SCS and concurrent 2025 MTIP Amendment for the Baseline year and Build scenarios in the Sacramento area across the various horizon years are shown in Appendix C, Table 1. These forecasts are converted to motor vehicle emission estimates by SACOG using EMFAC 2021.

Appendix C, Table 6a, presents the results of the Interim Baseline test for the PM_{2.5} emissions and the NOx precursor. The analyses indicate that the motor vehicle emissions are lower under the build scenario when compared to the Baseline scenario. The off-model adjustments approved by EPA on May 6, 2026 were applied in the final calculations of NOx and PM_{2.5} (Background material: EPA approval letter on the interim off-model adjustment factors).

EMISSIONS BUDGET TEST FOR THE YUBA CITY-MARYSVILLE PM_{2.5} NONATTAINMENT AREA

Under the emissions budget test, all future year PM_{2.5} emissions associated with the 2025 MTP/SCS and concurrent 2025 MTIP Amendment must be equal to or less than the budgets identified in the *2014 Yuba City-Marysville PM_{2.5} Maintenance Plan and Redesignation Request* for the Yuba City-Marysville Nonattainment Area. The emissions budget in the Maintenance Plan for 2024 was found adequate by EPA in a letter issued August 12, 2014.

Appendix C, Table 6b, shows that PM_{2.5} emissions associated with this analysis are less than the budgets identified in the maintenance plan for the Yuba City-Marysville Nonattainment Area for all future years. The off-model adjustments approved by EPA on May 6, 2026 were applied in the final calculations of NOx and PM_{2.5} (Background material: EPA approval letter on the interim off-model adjustment factors).

IMPLEMENTATION OF TRANSPORTATION CONTROL MEASURES

The 2025 MTP/SCS and concurrent 2025 MTIP Amendment provides for both priority and timely completion/implementation of the transportation control measures (TCMs) in the applicable air quality plans. Appendix D of the *2009 Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan* included 43 TCMs for the SVAB; 2018 finalizes completion of these TCMs. The *Sacramento Regional 2008 NAAQS 8-Hour Ozone Attainment and Reasonable Further Progress Plan* continued one of the TCMs through 2024. The TCM has been expanded through 2032. Timely implementation documentation on this measure is contained in Appendix D of this document. (§93.113).

PUBLIC PARTICIPATION PROCESS

Review of this document is part of the conformity consultation process as required under Sections 93.105 (a) (2), 93.105 (c) (1), and 93.105 (e) and is consistent with the public involvement procedures under 23 CFR 450 (93.112). This draft air quality conformity analysis will be circulated for 30 days to give all affected parties an opportunity to comment. The SACOG Board of Directors is scheduled to act on this conformity determination at its August 20, 2026 meeting. Any comments received by SACOG during the comment period will be included, along with staff's responses, with the final conformity analysis submittal package as part of Appendix G.

SACOG follows the procedures outlined in its Public Participation Plan for amendments and adoptions to our plans and programs which require a conformity analysis. SACOG's Public Participation Plan (PPP), updated October 2021 outlines the techniques employed by SACOG to help facilitate public participation during the development of the MTP, and any amendments, and solicitation of projects for the MTIP. SACOG's Public Participation Plan provides for early and continuing participation in our long-range transportation plans, our project-selection or programming process (i.e., Federal TIP), and the air-quality "conformity" determination and environmental reviews associated with these plans and programs.

The Regional Planning Partnership (RPP), a committee established by the SACOG Board of Directors to review all conformity determinations and assumptions (see Appendix E), was asked to review and approve a set of assumptions for use in future conformity determinations. The Partnership approved the assumptions used in this conformity determination on December 4, 2024 (see Appendix C, Table 7).

RESOLUTION OF APPROVAL

A copy of the resolution of adoption finding that the 2025 MTP/SCS and concurrent 2025 MTP Amendment meets federal conformity requirements is included as Appendix F. The SACOG Board is scheduled to act on this conformity submittal at its August 20, 2026 meeting.

CONCLUSION

The results of the emissions analysis show that the 2025 MTP/SCS and concurrent 2025 MTIP Amendment meets the emissions conformity tests based on the Transportation Conformity requirements found in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, Code of Federal Regulations, Part 93, Subpart A for the Sacramento ozone, PM₁₀, and PM_{2.5} areas; the Yuba City-Marysville PM_{2.5} area; and the Sutter Buttes Ozone Nonattainment Area.

§93.122 (g)	If appropriate, document that the conformity determination relies on a previous regional emissions analysis and is consistent with that analysis. The new plan and TIP contain all the projects that must be started to achieve the highway and transit system envisioned by the plan ((g)(1)(i)) All plan and TIP projects are included in the transportation plan with design concept and scope adequate to determine their contribution to emissions in the previous determination; (g)(1)(ii) The design concept and scope of each regionally significant project in the new plan/TIP are not significantly different from that described in the previous (g)(1)(iii))		N/A
§93.124	Document if there are subarea budgets established, and for which areas (93.124(c)). Document if there is a safety margin established, and what are the budgets with the safety margin included (93.124(a)). Document if there has been any trading among budgets, and if so, which SIP establishes the trading mechanism, and how it is used in the conformity analysis (93.124(b)). If there is more than one MPO in the area, document whether separate budgets are established for each MPO (93.124(d)). The previous regional emissions analysis meets 93.118 or 93.119 as applicable ((g)(1)(iv))	10-11	See "Analysis Techniques." There are no safety margins for the budgets. There is no trading among budgets.
§93.126 , §93.127 , §93.128	Document all projects in the TIP/RTP that are exempt from conformity requirements or exempt from the regional emissions analysis. Indicate the reason for the exemption (Table 2, Table 3, traffic signal synchronization) and that the interagency consultation process found these projects to have no potentially adverse emissions impacts.		See Appendix B Transportation Project Listing, Exempt Project Listing

¹Note that some areas are required to complete both interim emissions tests.

² 40 CFR 93.122(b) refers only to serious, severe and extreme ozone areas and serious CO areas above 200,000 population

REG17943	SAC	RT	Green Line (DNA) Light Rail - Overall	This project will redefine a Minimum Operable Segment (MOS) 2 and a MOS 3. REG17935 includes the Final Design and Construction for the project (excluding MOS-1).This phase of the Green Line to the Airport (DNA) Light Rail Project will consist of two discreet, yet connected efforts. For the segment of the Green Line near and adjacent to the Sacramento Intermodal Transfer Center (SITF), the effort will entail the preparation of Draft EIS (and EIR), its circulation for public review and comment, addressing the comments and will culminate with a Final EIS (and EIR). The segment of the project adjacent to the SITF will be coordinated with on-going Sacramento Streetcar planning, environmental review, and design development. For the remainder of the 13-mile corridor, the effort will entail the preparation of a Draft EIS (and EIR) only and its circulation for public review and comments. An MOS will also be identified for this segment. The effort will also evaluate low-floor LRT vehicles and their integration into the RT system, evaluate LRT vehicle maintenance locations for the Green Line, evaluate downtown Sacramento rail/traffic effects of the proposed service, prepare the necessary technical information and for a New Starts evaluation under MAP-21, and involve the community and stakeholders in an outreach program for both efforts. Advanced conceptual engineering and preliminary engineering in key areas with potential for environmental impacts that may require mitigation strategies for the EIS will be completed.	\$13,546,336	Programmed	2027

YOL19573	YOL	Yolo County	Engaging Yolo County Youth, Children, and Families	In Yolo County, access to services for Yolo County's most underserved communities can be challenging and occurs for many reasons. Those in rural settings are impacted by limited resources, including limited transportation and underfunded infrastructure, further isolating residents. This project will engage community members in rural and urban areas countywide with culturally and linguistically responsive outreach opportunities to receive community input which will inform the County on what gaps they identify in service attainment to develop higher quality access to resources. Through this concerted outreach and engagement effort the goal is to make an impact on outcome disparities in Yolo County. The outreach and engagement will utilize the Yolo County Office of Education's Roadmap to the Future needs assessment to address the various issues relating to mobility and access and improve service delivery for opportunities already offered in Yolo County. Additional input on other community-raised concerns will also be received. The County's strategic partnership with community-based organizations: Health Education Council and RISE, Inc. will provide an expansive countywide reach that touches urban and rural settings and includes residents from many diverse factions of the broader community.. Notes:

¹ See Figure 1 for specific areas and geographies for each emissions factor.² Where mentioned "Budget" figures come from the latest adopted State Implementation Plan or motor vehicle emissions budget adequacy finding.³ Indicates which season is used for setting EMFAC2021 for estimating emissions.⁴ 2026 is modeled to reflect a budget year for the 2015 ozone standard. 2026 is a budget year for Yuba City-Marysville PM_{2.5} Maintenance Area. The proposed budgets in the second PM_{2.5} 10-year maintenance plan for 2026 are pending.⁵ 2029 and 2032 are two proposed budget years for 70 ppb 8-hr ozone SIP.⁶ 2033 is the proposed attainment year for PM₁₀ under the second maintenance plan.⁷ These are the milestone forecast years for SACOG's regional travel demand modeling input files (e.g. land use, population, employment and demographic files). Vehicle activity forecasts needed for interim years are generated by interpolating input files by subarea, and running the travel demand model with travel networks for the air quality conformity analysis years.⁸ These are the milestone forecast years of MTC's regional travel demand modeling input files. For ozone and PM_{2.5} analysis, MTC provides to SACOG travel demand model vehicle activity files for eastern Solano County for these milestone years. For ozone and PM_{2.5} conformity analysis years which fall between the milestone years, SACOG staff interpolates the given vehicle activity data using average annual growth factors.⁹ The "2014 Yuba City-Marysville PM_{2.5} Maintenance Plan and Redesignation Request" budgets were found adequate by EPA in a letter dated August 12, 2014; effective September 9, 2014. The proposed budgets in the second PM_{2.5} 10-year maintenance plan for 2026 and 2035 are pending.¹⁰ The budgets were approved by EPA on March 14, 2024 and effective April 15, 2024. 2027 and 2033 are two budget years.¹¹ The "Sacramento Regional 2008 NAAQS 8-Hour Ozone Attainment Plan and Reasonable Further Progress Plan," and the Sacramento Metro Area portion of the "2018 Updates to the California State Implementation Plan" were approved by the EPA on October 22, 2021. Budgets became effective on November 22, 2021.¹² 2027 is a budget year for the second 10-year PM₁₀ maintenance plan for Sacramento County.¹³ 2035 is a budget year and the attainment year of the second PM_{2.5} 10-year maintenance plan for Yuba City - Marysville area. The proposed budgets in the second PM_{2.5} 10-year maintenance plan for 2035 are pending.

Italicized numbers are interpolated from milestone years.

Notes:

¹ Population and employment for the SACOG area are from SACOG projections prepared in 2022 for the 2025 Blueprint. Milestone years for population and employment projections are: 2020, 2027, 2035, 2042, and 2050. Population and employment for other analysis years are interpolated from the milestone years by subarea using annual average growth rates. Projections are shown for the entire SACOG modeling area as shown in Figure 1.

² Vehicle miles traveled are reported from SACOG's "SACSIM" regional travel demand model for the entire SACOG modeling area as shown in Figure 1. Vehicle activities are explicitly modeled for all analysis years, using the above population and employment data. These vehicle activity forecasts provide the inputs to EMFAC2021 for the geographies and emissions tests shown in Table 1 and Figure 1.

³ For PM_{2.5} and the ozone pre-cursors (NO_x, ROG), MTC provides Eastern Solano County vehicle activity estimates to SACOG for use in its conformity analysis. MTC's milestone years are: 2025, 2030, 2040, and 2050. VMT and vehicle population for 2026, 2029, 2032, 2035, and 2042 are interpolated from the given milestone year data. Interpolation was performed by SACOG staff, using average annual growth rates between milestone years.

Table 7. Air Quality Conformity Assumptions

Assumption 1	The SACOG Board adopted household, housing, and employment projections for the years 2035 and 2050 at its February 2022 meeting. These land use projections will be used for this conformity analysis and determination and interpolating land use for 2027 and 2042. Vehicle activities for all other milestone years (including 2026, 2029, 2032, 2033) will be interpolated using the available full model runs for 2027, 2035, 2042, and 2050. These projections meet the current definition of “latest planning assumptions.”
Assumption 2	Emissions Factor 2021 (EMFAC2021) and approved off-model adjustments will be used to develop emission estimates for the conformity analysis and determination associated with the adoption of the 2025 Blueprint (MTP/SCS). The emission budgets used in the conformity determination are the 8-Hour Ozone (2008 standard) emission budgets; or adjusted budgets based upon pending EPA approval of the Ozone SIP for the 2015 standard. The 2008 budgets were found adequate by EPA on October 22, 2021 and became effective November 22, 2021. Particulate Matter (PM10) will use budgets which were found adequate by EPA on March 14, 2024 and became effective April 15, 2024. Fine Particulate Matter (PM2.5) will use the Yuba City-Marysville Area budgets found adequate August 25, 2014 and became effective September 9, 2014; or adjusted budgets based upon pending EPA approval of the Second Maintenance Plan.
Assumption 3	SACOG will use the most recent emission control factors supplied by the California Air Resources Board (CARB) for use in any future conformity determination. EMFAC2021 is used to determine emission control factors; it uses vehicle fleet assumptions that meet the current definition of “latest planning assumptions.”
Assumption 4	SACOG will continue to incorporate emission estimates for the part of Solano County within the Sacramento Federal Ozone Nonattainment Area and federal PM2.5 nonattainment area in all future conformity determinations as agreed to under SACOG’s existing Memorandum of Understanding (MOU) with the Metropolitan Transportation Commission (MTC).
Assumption 5	On-road control measures from the Ozone SIP that are not reflected in the EMFAC 2021 baseline will be documented.
Assumption 6	SACOG will use the assumptions on transit fares, auto operating costs, and parking costs consistent with the 2025 Blueprint analysis in the conformity analysis and determination. The transit fares projections are derived from the financing portion of the 2025 Blueprint development.

APPENDIX D—TIMELY IMPLEMENTATION DOCUMENTATION FOR TRANSPORTATION CONTROL MEASURES (TCMs)

TCM ID	Lead Agency	SACOG ID	Measure Title	Description	TCM Status Summary
AQ-3	SMAQMD	VAR56292	Spare the Air	The “Spare the Air” program is a year-round public education program with an episodic ozone reduction element during the summer ozone season, plus general awareness throughout the rest of the year. It is designed to inform people when air quality is unhealthy and achieve voluntary emission reductions by encouraging them to reduce vehicle trips.	TCM has been continuously implemented through 2018. This TCM has been proposed for extension through 2032 as part of the 2008 Ozone SIP.

APPENDIX E—CHARGE OF THE RPP

SACRAMENTO AREA COUNCIL OF GOVERNMENTS
REGIONAL PLANNING PARTNERSHIP
CHARGE

PURPOSE

The purpose of this Partnership is to assist SACOG with its transportation and air quality planning and programming processes, with an emphasis on technical issues, by providing consultation with a broad range of public and private constituencies. In addition, this partnership will help meet the inter-agency consultation requirements of both the Transportation Equity Act of the 21st Century (TEA-21) and the consultation requirements of the Federal Clean Air Act. Both of these laws require that SACOG provide for early and on-going public participation in our long-range transportation plans, project-selection or programming process, and air quality conformity determinations.

Activities of the Partnership may include, but are not limited to: developing roles and responsibilities for continuing a well-defined inter-agency consultation procedure for reviewing plans, programs, and projects; developing a process for responding to significant comments of involved agencies, individuals, and organizations; selection and adoption of planning assumptions and models; developing procedures for the conduct of transportation-air quality analysis, and for making findings of conformity; information sharing and discussing ideas and proposals that are of importance to SACOG and Partnership member groups.

The Partnership may establish such subcommittees, task forces, or study groups as it deems appropriate to carry out its charge.

MEMBERSHIP

The Partnership membership will consist of representatives from the following organizations:

1. Public Works and planning directors from each jurisdiction within the Sacramento Metropolitan Planning Area.
2. County-level transportation agencies such as the Placer County Transportation Planning Agency (PCTPA), the El Dorado County Transportation Commission (EDCTC), the Yolo County Transportation District (YCTD), and the Sacramento Transportation Authority (STA).
3. Metropolitan Transportation Commission (MTC) and Solano Transportation Authority.
4. Federal Highway Administration-California Division (FHWA), Federal Transit Administration - Region IX (FTA), Environmental Protection Agency - Region IX (EPA), Air Resources Board (ARB), Caltrans - District 3, and the California Highway Patrol - Valley Division.
5. Sacramento Regional Transit District
6. Air districts within the ozone nonattainment area.
7. Sacramento-Yolo Port District.
8. Sacramento County Division of Airports.
9. Transportation Management Associations (TMAs).
10. SACOG's Transit Coordinating Committee.
11. SACOG's Freight Advisory Council.
12. SACOG's Bicycle and Pedestrian Advisory Committee.
13. Environmental advocacy groups.

14. Social equity, disability, and minority advocacy groups.
15. Business/Chamber of Commerce groups.
16. Indian tribes within the SACOG region.
17. Organized labor.

Requests for membership on the Partnership from agencies or organizations not listed will be subject to recommendation by the Partnership and acted upon by the SACOG Board of Directors.

OFFICERS

SACOG staff will preside over the meetings.

VOTING

Recommendations to the Work Program Committee and the SACOG Board will be by consensus. If a full consensus cannot be reached on a recommendation, minority reports will also be forwarded to the Work Program Committee and Board for their consideration.

MEETINGS

The Partnership will hold regularly scheduled meetings. Special meetings may be called, as needed. All meetings will be open to the public. Agendas will be posted in the SACOG lobby as well as on the web page, www.sacog.org.

APPENDIX F—RESOLUTION OF ADOPTION AND PUBLIC NOTICE

NOTICE OF PUBLIC HEARING AND AVAILABILITY FOR THE SACOG DRAFT AMENDMENT #11 TO THE 2025 METROPOLITAN TRANSPORTATION IMPROVEMENT PROGRAM AND AIR QUALITY CONFORMITY ANALYSIS ASSOCIATED WITH THE 2025 METROPOLITAN TRANSPORTATION PLAN/SUSTAINABLE COMMUNITIES STRATEGY (MTP/SCS)

The Sacramento Area Council of Governments (SACOG) is pleased to announce the release of the following documents on May 15, 2026:

- **Draft Amendment #11 to the 2025-28 Metropolitan Transportation Improvement Program (MTIP)** – The MTIP is the short-range transportation program for the SACOG region, which includes the counties of Sacramento, Sutter, Yolo, Yuba, and portions of El Dorado and Placer County. Amendment #11 is prepared to demonstrate consistency with the region's long-range transportation plan.
- **Draft Air Quality Conformity Analysis associated with the 2025 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) and Amendment #11 to the 2025 MTIP** – The 2025 MTP/SCS, also known as the [2025 Blueprint](#), is the long-range transportation plan for the SACOG region, which includes the counties of Sacramento, Sutter, Yolo, Yuba, and portions of El Dorado and Placer County. The Air Quality Conformity Analysis is a determination of compliance with air quality standards for both the MTP and MTIP.

A public hearing on **Amendment #11 to the 2025 MTIP** and **Air Quality Conformity Analysis** will be held on June 4, 2026, during the Transportation Committee meeting which begins at 10:00 a.m. at 1415 L Street, Suite 300, Sacramento, CA or online at <https://www.sacog.org/meetings/meeting-agendas>. Please select the June 4, 2026 Transportation Committee meeting and Interactive Agenda to access the link at the time of the meeting. To comment during the hearing:

- In-person: Public comment may be made in person at SACOG's offices. You will have 3:00 minutes to speak. Please complete a speaker form and provide it to the clerk.
- Written comments: Written comments may be submitted via email to the clerk at lespinoza@sacog.org. Written comment will be shared with the committee in advance of the meeting if received by the clerk at least 24 hours prior to the meeting. Otherwise, they will be shared after the meeting. Written comment will not be read into the record.

The draft documents can be accessed online: <https://www.sacog.org/funding/metropolitan-transportation-improvement-program-mtip/current-mtip>

The public comment period for the Draft Amendment #11 to the 2025 MTIP and Air Quality Conformity Analysis associated with the 2025 MTP/SCS (Blueprint) will begin on **May 15, 2026** and end on **June 15, 2026**. Please submit comments by June 15, 2026 to mtip@sacog.org. Please contact SACOG staff with any questions at mtip@sacog.org.

Public notice of public involvement activities and time established for public review and comments on the Draft Amendment #11 to the 2025 MTIP and associated Air Quality Conformity Analysis will satisfy the program of projects (POP) requirements, as defined in FTA Circular 9030.1E.

Issued May 15, 2026

**SACRAMENTO AREA COUNCIL OF GOVERNMENTS
RESOLUTION NO. XX-2026**

**APPROVING THE JOINT CONFORMITY DETERMINATION ON THE 2025 METROPOLITAN TRANSPORTATION
PLAN/ SUSTAINABLE COMMUNITIES STRATEGY AND AMENDMENT #11 TO THE 2025 METROPOLITAN
TRANSPORTATION IMPROVEMENT PROGRAM**

WHEREAS, SACOG is the designated Metropolitan Planning Organization (MPO) for the Sacramento metropolitan planning area as defined by Section 134(c) of the Federal Highway Act, as well as for the Yuba City-Marysville urbanized area; and

WHEREAS, SACOG and the Secretary of Business, Transportation and Housing have executed memoranda of understanding (MOUs) with both the Placer County Transportation Planning Agency (PCTPA) and the El Dorado County Transportation Commission (EDCTC) that establish a framework of representation for how SACOG will carry out its federal MPO responsibilities in both El Dorado and Placer counties in cooperation and coordination with the agencies and jurisdictions in those areas within the ozone nonattainment area; and

WHEREAS, federal planning regulations require SACOG as an MPO to prepare and adopt a long-range Metropolitan Transportation Plan (MTP) for the region; and

WHEREAS, state law requires SACOG to adopt a Sustainable Communities Strategy (SCS) pursuant to SB 375 (Statutes of 2008) as part of the Metropolitan Transportation Plan every four years;

WHEREAS, the 2025 Metropolitan Transportation Plan/Sustainable Communities Strategy is hereafter referred to as the 2025 Blueprint;

WHEREAS, federal planning regulations require SACOG as MPO to prepare and adopt a Metropolitan Transportation Improvement Program (MTIP) for the region; and

WHEREAS, the 2025 Blueprint has been prepared to comply with federal and state requirements; and

WHEREAS, the MTIP has been prepared to comply with federal and state requirements;
and

WHEREAS, these documents have been developed and reviewed through the public participation process defined in SACOG's Public Participation Plan; and

WHEREAS, the 2025 Blueprint, the MTIP, and the corresponding Conformity Analysis are consistent; and

WHEREAS, the MTIP meets all applicable transportation planning requirements pursuant to 23 CFR Part 450; and

WHEREAS, the projects submitted within the MTIP must be financially constrained and the financial plan affirms that funding is available; and

WHEREAS, SACOG has integrated into its metropolitan transportation planning process, directly or by reference, the goals, objectives, performance measures, and targets described in other State transportation plans and transportation processes, as well as any plans developed under 49 U.S.C. Chapter 53 by providers of public transportation, required as part of a performance-based program; and

WHEREAS, the MTIP includes a discussion as to the effect of the programmed investments toward achieving performance targets as required in 23 CFR 450.218(q) and 450.326(d); and

WHEREAS, the 2025 Blueprint and the MTIP include a new Conformity Analysis; and

WHEREAS, SACOG must demonstrate conformity pursuant to 40 CFR Part 93 for the 2025 Blueprint and MTIP; and

WHEREAS, the 2025 Blueprint and the MTIP do not interfere with the timely implementation of the region's Transportation Control Measures; and

WHEREAS, the 2025 Blueprint and the MTIP conform to the applicable State Implementation Plans for air quality; and

WHEREAS, the 2025 Blueprint achieves greenhouse gas reduction targets established by the CARB and meets the requirements of SB 375; and

WHEREAS, the documents have been widely circulated and reviewed by SACOG advisory committees representing the technical and management staff of SACOG's member agencies; representatives of other governmental agencies, including state and federal; representatives of special interest groups; representatives of the private business sector; and residents of the SACOG region consistent with the public participation plan adopted by SACOG; and

WHEREAS, a public hearing was conducted on June 4, 2026, to hear and consider comments on the joint Conformity Determination on the 2025 Blueprint and MTIP.

NOW, THEREFORE, BE IT RESOLVED, that SACOG finds the foregoing recitals true and correct and incorporated by this reference.

BE IT FURTHER RESOLVED, that SACOG approves and adopts the joint Conformity Determination on the 2025 Blueprint and the MTIP.

BE IT FURTHER RESOLVED, that SACOG finds that the 2025 Blueprint and the MTIP are in conformity with the requirements of the Federal Clean Air Act Amendments and applicable State Implementation Plans for air quality.
